

Release of Information Specialist

INDUSTRY FACTS

What do Release of Information Specialists do?

Release of information specialists, often called

electronic health records technicians, deliver medical records and procedural information to the proper recipients. It's a behind-the-scenes role that greatly impacts the patient experience. As such, strict adherence to HIPAA guidelines is absolutely essential. The most successful ROI specialists also have exceptional customer service skills, strong attention to detail, and an uncanny ability to work well in groups as they often collaborate with other specialists.

Where do they work?

When it comes to physical expectations, this role is similar to a standard desk job. Hospitals, health clinics, and physicians' offices are generally all staffed with some level of health information technician support—there's also potential to work from home, depending on the needs and expectations of your employer.

How much do they earn?

While this isn't a patient-facing role, the impact medical records specialists have on health systems is undeniable—and the salary potential is a reflection of that impact. The salary for this specific role varies based on location and experience, but the national median annual income, according to the U.S. Bureau of Labor Statistics, is \$45,240.

How's the job outlook?

While not as explosive as other career paths, the need for medical records specialists is still trending in the right direction. Estimates indicate a 9% job growth rate over the next ten years. In 2020 alone, there were 416,000 open jobs in the medical records career category.

"I have truly enjoyed my experience with CareerStep. Their programs allow you to work on your studies on your own time, which is fantastic for busy moms like myself. If I have ever run into problems with anything, all I have to do is text someone from learner support and they are there to help me."
